

ABSTRACT OF THE DISCLOSURE

5 An insulated wall system for a basement with foundation
concrete walls that are nearly adjacently disposed to masonry
block or concrete walls. The insulated wall system has a
plurality of vertical metal studs with C or U-shaped cross-
sections forming a plurality of cavities nearly adjacent to the
interior concrete walls. There is also a plurality of fiberglass
10 insulation sections that are frictionally fit in the plurality of
cavities and a plurality of fire retardant sheets or skrimms of
drywall that are attached to the plurality of vertical metal
studs thereby holding the plurality of fiberglass insulation
sections within the insulated wall system.
